ON-VEHICLE CALIBRATION UNIT TYPE 2

On-board calibration units are a vehicle-mounted verification system designed to calibrate fuel dispensers. It allows accredited calibration companies to go to stations and perform on-site measurement checks of fuel dispensers. This product is designed to be installed in closed body, light commercial vehicles. There is 1 20 liter and 1 50 liter fuel scale, independent of each other. Since the bottom fixing of the scales is articulated, it allows the scales to be leveled and measured even if the vehicle is not on flat ground. Thanks to the storage tanks with level indicators, each of 145 liters, you do not need to pour the fuel in the scales into the fuel tank after each scale check. Note: Calibration has been made in accordance with OIML R-120 and TSEK 491.

Standard:	OIML R 120 – TSEK 491
Sensitivity:	0.1% (One per thousand)
Resolution:	10ml
Material:	Carbon Steel ST 37
Thickness:	1.5mm
Valve:	2″ Carbon Steel
Scale:	A total of 2 pieces, 1 of 20 liters and 1 of 50 liters
Grounding Reel:	ATEX Certified, 10 meter ground cable
