ON-VEHICLE CALIBRATION UNIT TYPE 3

On-board calibration units are a vehicle-mounted verification system designed to calibrate fuel dispensers. Accredited calibration companies or the country's metrology authorities can go to stations and perform on-site measurement checks of fuel dispensers. This product is designed to be installed in light commercial vehicles. The measuring volume is 100 liters. Thanks to the adjustable feet, it allows measurement by being placed on a scale. Note: Calibration has been made in accordance with OIML R-120 and TSEK 491. For use in legal metrology, it must be calibrated separately by an accredited organization.

Standard:	OIML R 120 – TSEK 491
Sensitivity:	0.1% (One per thousand)
Resolution:	10ml
Material:	Stainless Steel 304
Thickness:	1.5mm
Valve:	2” Stainless Steel 316
Scale:	100 L
Grounding Reel:	ATEX Certified, 10 meter ground cable
