DEFBOX 220 ADBLUE TRANSFER PUMP – 220V – 40L

Adblue, used to reduce the emission values of diesel engine vehicles, consists of 2.5 percent cleaned urea and 2.5 percent pure water. AdBlue; It converts the majority of nitrogen oxide gases, which cause air pollution, into water vapor and harmless nitrogen (nitrogen) gas by spraying on the high-level exhaust gases emitted from the engine. Therefore, it does not increase vehicle performance or reduce fuel consumption. Our product, AUS 32 Urea Solution, called Adblue, is offered for sale with the statement "NOT USED IN PURCHASE AND SALE" for many non-commercial uses such as industrial, logistics, agriculture, mining, construction and auto services.

Per minute:	40 Liters
Pump Type:	Single Gun
Indicator Meter:	ETM 58 Turbine meter type digital meter
Hose Length:	4 meters
Hose Diameter:	¾
Gun:	Mites Plastic AdBlue Gun
