MITES MVR STEAM RECYCLING ADAPTER

While carrying gasoline in fuel tankers produced in accordance with ADR, that is, "Regulation on the Transport of Dangerous Goods by Road", no vapor is released into the atmosphere until it reaches the fuel station from the filling facility. In order to prevent the vapor from mixing with the atmosphere while discharging gasoline into the underground tank at the fuel station, MITES STEAM RECYCLING COMPOSITE HOSE - BGD HOSE is connected to the product and the vapor in the tanker is transferred to the underground fuel tank.
