MITES MVR STEAM RECYCLING FLOAT

ADR is the abbreviation of "Regulation on the Transport of Dangerous Goods by Road". This regulation determines the measures that must be taken to reduce the risk of harm to human health, the environment and other vehicles during the transportation of hazardous substances. For this reason, when transporting gasoline in fuel tankers produced in accordance with ADR, vapor should not be released into the atmosphere from the filling facility to the fuel station. While discharging gasoline into the underground tank at the gas station, products such as MİTES Vapor Recycling Composite Hose (BGD Hose) can be used to prevent the vapor from mixing with the atmosphere.
