MITES AUTOMATIC ADBLUE GUN

It is produced for the transfer of fluid liquids such as Adblue, milk and water. Thanks to the trigger system, when the liquid is filled to the tip of the gun, the trigger mechanism closes to prevent the liquid from overflowing from the tank. The pipe part of the gun is made of stainless steel, and the other parts are made of special engineering plastic. It is ATEX certified as it operates according to the "Zone 1" classification in the area where there is a risk of explosion in fuel stations.

Product No: TDR2000000275
