TRANSET 40 DC DIESEL TRANSFER PUMP

The pump is designed as a product that can be used in many sectors such as automotive, agriculture, mining and construction. Transet 40 DC has 24 Volt and 12 Volt engine options and can be operated with a quality battery. The product can operate with an efficiency of 40 Lt/Min, and this efficiency may vary depending on factors such as hose length and battery amperage. Since DC motors use carbon type motors, they are not suitable for continuous use and it is recommended to let them cool down after 15-20 minutes of use. The glass is protected by a fuse to prevent the motor from overheating.

Product No: TDR2000000273
