MTS-804 PBV PRESSURE BALANCED REGULATION VALVE-BOTTOM VALVE

This product is a pneumatically controlled valve located at the bottom of each compartment in fuel tankers. The function of this valve is to ensure that the fuel in the relevant compartment is transferred to the installation. In this way, pressure or vacuum that may occur during filling or discharging is prevented. To close the foot valves in an emergency, emergency stop buttons or the on-off button on the control block are used.

Standard:	EN 13308
Working Pressure:	6 Bar-600kPa
Operating Temperature:	-20°C / +50°C
Body:	Aluminum (ETIAL 171)
Weight:	5.6Kg
Dimension (LxWxD):	270×310×220mm
Output Size:	4" - DN100
Sealing Element:	Viton, NBR

Product No: MTS1000000240
