MTS 700 FUEL TANKER FILTER

Although they are generally used in fuel tankers, they are line type filters produced to prevent the particles in the fuel from damaging the equipment and flow control units on the line. The internal filter is stainless steel, cleanable and replaceable. Although the inlet-outlet flange is 2" in standard production, it can be shipped with different sizes of flange upon your request.

Product Type:	Gasoline-Carosene-Diesel
Flow (QMin-QMax):	10-850 L/min
Ambient Operating Temperature:	-20°C / +60°C
Internal Filter:	50 Micron
Weight:	8 Kg
Dimension (LxWxD):	250×200×150mm
Flange Diameter:	2" – 2½" – 3"
Meter Body:	Cast Iron (PIG GG25)

Product No: TDR2000000386
