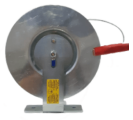
MTS-M10S GROUNDING REEL

Grounding reels are used in the supply of fuel oil and flammable materials, in the paint, defense and aircraft industries, etc., where grounding and static charge protection activities are carried out. These are systems used to discharge static electricity in areas. Our ATEX certified product with 10 meter cable is for manual winding use. The discharge process is carried out from the lower surface of the reel foot and the axle in the hub. For this reason, ensuring that the ground to which the reel is connected is conductive to allow discharge will ensure better operation of the system.

Relevant Standard:	EN IEC 60079-0:2018, EN ISO 80079-36:2016, EN ISO 80079-37:2016
Cable Length:	10 meters (please call for special productions of 5 to 20 meters)
Cable Cross Section:	7mm2
Conductor Diameter:	3mm2
Insulated Outer Diameter:	4mm2
Cable Type:	PVC Coated, Steel
Maximum Resistance Force:	450 N
Ambient Operating Temperature:	-30°C / 60°C
Weight:	2.5 kg
Packaged Weight:	2.70kg



Product No MTS1000000194
