WATER TRAP FILTER

The body of the filter consists of a water absorbing cartridge. These filters prevent water from entering the tanks of engines running on diesel fuel along with the fuel. This filter separates and absorbs the water contained in diesel fuel. It is recommended to replace the frequently used filter from time to time.

Filtering capacity:	30 µm
Flow rate:	70 - 150 l/min
Working pressure:	3.5 bar
Burst pressure:	10 bars

Product No TDR2000001213
