MITES ADBLUE SALES PUMP 220V - 40L / SHORT CASE

AdBlue, used to reduce the emission values of diesel engine vehicles, consists of 2.5% cleaned urea and 67.5% pure water. AdBlue is sprayed on the high exhaust gases coming out of the engine and converts the majority of nitrogen oxide gases, which cause air pollution, into water vapor and harmless nitrogen gas. Therefore, it does not increase vehicle performance or reduce fuel consumption. Our product is designed for the commercial sale of AUS 32 Urea Solution, called Adblue, at fuel stations. Our MID and ATEX certified products are compatible with cash registers and automations. It provides ease of use thanks to its double-sided display. Since it is a dispenser (submersible type), it is ATEX compliant. Note: DEFTRANSET 35 ADBLUE SUBMERSIBLE PUMP should be used with our product.

Fuel Type:	Adblue
Maximum Capacity:	40 L/Min.
Display:	2 Pieces
MID Certificate:	Yes
ATEX Certificate:	Yes
Pump System:	With submersible (Adblue submersible is included in the system and price.)
Gun:	ATEX certified, Automatic trigger
Dimension (LxWxD):	1300 x 550 x 500mm
Weight:	80 Kg.

Product No MTS1000000260
